1-module, DIN rail mounted

- Supply voltage AC 230V
- Function of gradual dim-up and dim-down, controlling inputs for push button and switch
Protection against button dead locking
Potentiometers adjust:
- speed (fluency) of switching on - maximum intensity of light - time of maximum intensity light - speed (fluency) of switching off

Contactless output: 1x triac
Connection

Load AC1 2A / 500W

## Function

Controlled via input T 1 (button)

Controlled via input T2 (switch)

Cycle dim-up time is activated by press-
ing the button; By repressing the button
(during the cycle) it is possible to prolong
the time of the cycle.
Legend:

| Uutput / Brightness: 10-100\% |  |
| :---: | :--- |
| t1 | Dim-up time: $11-40 \mathrm{~s}$ |
| t2 | Time delay: 0 s-20min |
| t3 | Dim-down time: $1-40 \mathrm{~s}$ |
| T1/T2 | Controlling contact |

The cycle is started by activating the switch and breaks on max. adjusted brightness level. After the switch is turned off the switch cycle is complete.

## Description

## 1-module design

## Dimmer DIM-14

| Advantages |
| :--- |
| 1-module, DIN rail mounting |
| Supply voltage: AC 230 V |
| Designed for dimming of electrical bulbs and halogen |
| lights with wound or electronic transformer |
| For switching and dimming of lights, control inputs for |
| a button |
| Short pressing switches ON/OFF, longer pressing (more |
| than 0.5 s) enables gradual light intensity setting when |
| switched off, brightness level is stored in a memory and |
| when switched on again last brightness level is restored |
| Output without contacts: $2 x$ MOSFET |
| LED output indication (with any level of brightness) |
| Possibility of parallel connection of control buttons |
| Resistive, inductive or capacitive load, up to 300 W , for a |
| short term up to 500 W |

| *When load is above 300 VA it is necessary to ensure sufficient cooling |  |
| Recommendation for mounting: leave a gap of min. 0,5 module ( approx. 9 mm ) on side of the device to ensure better cooling of the device. |  |
| Warning for DIM-14: it is not allowed to and capacitive type at the same time | gether loads of inductive |

- Simultaneous connection of inductive and capacitive load is not allowed.
- Electronic overvoltage protection
- Protection against temperature overrun inside a device output off and signalization of overheat by LED flashing
